Who We Are

The United Nations International Computing Centre (UNICC) has 50 years of experience providing digital business solutions to United Nations programmes, funds and entities, as well as other United Nations and related not-for-profit organisations.

Its mission is to provide digital business solutions, maximising the sharing of innovation and infrastructure to systems and skills in order to generate economies of scale to benefit its more than 70 Clients.

The organisation has a strategic view of technology support for United Nations goals and results, with expertise and complex knowledge about ICT environments. As a United Nations entity, UNICC is uniquely positioned to understand and meet the needs of its Clients.

What We Do

UNICC provides core business services to United Nations Agencies, including client services, support for innovative technologies, information security, data and analytics, software as a service and cloud integration services, infrastructure and platform services including network service, enterprise backup, ERP, web hosting and enterprise collaboration platforms. UNICC offers cost savings, business efficiencies and volume discounts based on the scale of its engagements. UNICC operates on a full cost recovery basis, with surplus funds being refunded at the end of projects or initiatives.

The UNICC Advantage

UNICC is the premier shared service provider for the United Nations, providing agile, cost-effective, UN-audit compliant digital business services. UNICC is highly competitive with today’s technology marketplace, building synergies with industry partners as well as with its Clients. UNICC’s data centres and offices are extra-territorial, meaning that they are not under the jurisdiction of any national authority. The data and systems UNICC hosts are protected from any national interest or intrusion, safeguarding United Nations jurisdiction. UNICC is governed by the same rules as its Partner Organizations for procurement, financial audits and reporting.

Business First

UNICC maintains a strategic view of digital business support for United Nations goals and deliverables around the globe. UNICC's expertise and complex knowledge about United Nations digital business environments means that Clients and Partner Organizations get the top of today's technology marketplace services with the best value money can buy.

Several principles frame the engagements UNICC has with its Clients and Partner Organizations:

- Business acumen and responsiveness
- Courteous and professional attention
- Collaborative, honest communications
- Aligned services, architecture, portfolio
- Proactive understanding of Client needs
- Timely and useful information sharing.

Figure 1. The UNICC advantage: nearly 50 years of UN and digital business experience.

Governance

UNICC is governed by its Management Committee membership, comprised of representatives from its Partner Organizations. The UNICC Mandate, the Memorandum of Understanding that all Partner Organizations sign and Service Delivery Agreements provide the policies and guidelines governing all service engagement.

The UNICC Mandate covers jurisdiction, structure, governance, arrangements for service provision, funding and cost recovery processes, liabilities and safeguards. UNICC's Memorandum of Understanding includes rules for service management, UNICC and Client management roles and responsibilities, confidentiality and security as well as payment protocols. Service Delivery Agreements govern the scope, service description, roles and responsibilities, cost estimates, and service metrics and Operational Levels (OLAs) for every service partnership.

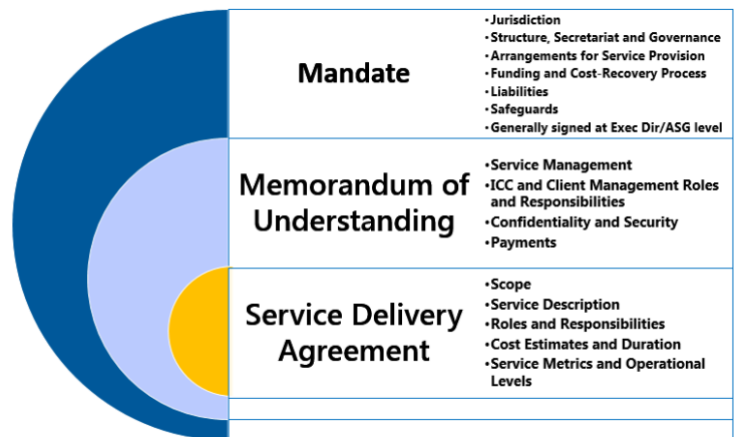

Figure 2. UNICC's governance model and approach.

Superior Operations

Operational excellence, service level management and continuous service improvement are fundamental to UNICC's mission, vision and governance. They span the landscape of UNICC's digital projects and services and account for UNICC's trusted reputation with Partner Organizations and other Clients. UNICC's operations are tried and trusted, with:

- Strategic oversight
- Enterprise architecture
- Product development
- Efficient project management
- Continuous service improvement.

UNICC is a core contributor to United Nations programme delivery. Photo: UNDP/Wright

UNICC is committed to improving its Client experience by building trust through standards-based service delivery, improving value for money, fostering cross-functional collaboration and communications and advancing the capabilities of its Clients and Partner Organizations to respond to and anticipate their needs in an ever-changing digital business landscape.

Global Presence and Impact

In order to meet its goals and provide quality services to its Clients, UNICC has established offices in five strategic locations, as well as a presence in the Green One UN House in Hanoi, Vietnam, to support its Asian Clients.

- Geneva, Switzerland
- New York, USA
- Brindisi and Rome, Italy
- Valencia, Spain.

Figure 3. UNICC's 70+ Clients and Partner Organizations today.

Worldwide Data Centres - UN Jurisdiction, Immunities and Privileges

UNICC's data centres are geographically distributed over the world and comply with the United Nations jurisdiction. The organisation ensures that Client data meets all UN immunities and privileges. UNICC provides service continuity and Disaster Recovery for all of its environments and service delivery options. Data centres are located as follows:

- Primary Data Centre (Valencia, Spain)
- Primary Data Centre (Geneva, Switzerland)
- Secondary Data Centre (Geneva, Switzerland).
- North American Data Centre (Piscataway, NJ, USA).

Clients can focus on core business activities by leveraging UNICC's services. Photo: UNDP

Staff Expertise

The unique business environment of UNICC requires a workforce that is versatile and skilled in deploying and supporting diverse technologies across the digital business spectrum.

It demands knowledgeable staff who are familiar with United Nations goals, ethics, regulations, procurement, business and technology environments.

Staff and contractors command industry-standard certifications in the areas of strategic advisory services, professional services, training, communications, data and analytics, application development, Robotic Process Automation (RPA), software services, platform services, infrastructure services, as well as public cloud integration and management services.

This includes training, qualification and certification from key industry partners and suppliers, including Microsoft, Oracle, and Cisco, and professional certifications in governance (COBIT 5), information security (ISO 27001), project management (PRINCE2, PMBOK and ISO 21500) and service management (ITIL and ISO 20000). This advanced expertise allows UNICC to function as the go-to digital business organisation for the entire United Nations family.

Best Practices, Standards and Certifications

Figure 5. UNICC services use industry standards and certifications.

UNICC’s staff are trained in Information Technology Infrastructure Library (ITIL) service management standards, PRINCE2 project management methodologies and use the COBIT 5 standard as a governance internal control framework.

UNICC has established and embedded a culture of continual improvement in the quality of digital business services by implementing ISO 20000 certification for all UNICC services. UNICC’s Business Continuity management Systems are certified with ISO 22301:2019.

Common Secure Information Security

UNICC is committed to maintaining appropriate levels of information security, pursuing a number of relevant certifications and independent audits based on international standards, including ISO 27001:2015 and ISAE 3402.

UNICC’s information security services, with over 30 Clients, offer continuous, reliable and timely information security protections and controls, including gathering critical cyber information from Partner members, commercial security firms, service providers, federal, state and local government agencies, law enforcement and other trusted resources.

These services help to strengthen relationships with the cyber community at large on behalf of United Nations organisations and to foster a reputation for excellence. UNICC is thus uniquely positioned to quickly disseminate cyber threat alerts and other critical information to subscribing organisations across the world.

UNICC is a 2017 and 2020 CSO50 information security award winner.

UNICC’s Trusted Services

UNICC has been the go-to service provider for United Nations programmes, funds and entities since its inception. UNICC, a United Nations entity itself, provides services to its Partner Organizations, other United Nations Agencies and related not-for-profit organisations.

All told, UNICC’s Clients number over 70, including 40 Partner Organizations (those with membership or representation in UNICC’s Management Committee).

UNICC places a lot of importance on operational excellence, with particular emphasis on the performance and availability of its services and the level of security associated with them.

Testimonials

Partnership is the art of understanding shared value. In WFP we have a number of partnerships, not many, but the ones that we have are deep, are sustained, are long-term. And definitely UNICC is one of them.

Enrica Porcari, CIO and Director of Technology, WFP

Technology and partnerships play a large part in making the dollars go further. We have to partner across Agencies, leveraging and building on institutions like UNICC.

Hans Baritt, Controller, Director, Division of Financial and Administrative Management, UNHCR

The focus on end user satisfaction was the measure of success for our IP Telephony project.

Soren Thomassen, IT Director, UN Women

With UNICC's data and analytics solutions, UNJSPF can transform the way it does business. The data visualisation is wonderful - a picture really is worth a thousand words!

Miharu Goto Gill, Chief, Enterprise Solutions, UNJSPF

We are pleased to renew our decade-long relationship with UNICC and look forward to continuing to optimise the system with new technology and the most trusted service support.

Paul Raines, CISO, UNDP

Figure 6. UNICC services overview

Client Services

UNICC offers its Clients strategic advisory services, subject matter expertise, IT Advisory Firm Services, project management, communications, application development, training and learning, Robotic Process Automation (RPA) and monitoring.

Professional Services

Professional services spans the Client Services area, with a wide array of services across the technology landscape. UNICC professional services are flexible enough to deliver one-time projects and related on-going services for Clients. Professional services are negotiated to fit all requirements including scope, deliverables, roles, responsibilities as well as cost estimates.

Utilising proven best practices, procedures, guidelines, standards as well as tools, professional services are delivered in multi-disciplinary areas. Examples include:

- Information security services
- Application development projects
- Project management and service desk
- ERP or CRM implementation
- Infrastructure/platform/application support and integration
- Performance testing and technical security testing.

Professional services are negotiated to fit all requirements. Photo: WIPO/Berrod

Software Services

UNICC offers its Clients hosting and delivery of software applications designed to be delivered over the Internet for their end-users. This includes business applications, business data as well as the underlying cloud platforms and infrastructure tailored to run the software. Benefits include resiliency, end-to-end setup and support, cloud services management and cost management, lower total cost of ownership, scalability and seamless state-of-the-art solutions.

Platform Services

UNICC offers computing platforms that allow administrators and developers to create, run and customise their application suites, including software-as-a-service components. UNICC manages computing platforms for ERPs and CRMs, data and analytics, web hosting applications, database, middleware, directory, resources and domains platforms.

Infrastructure Services

UNICC provides computing infrastructure resources that allow administrators and engineers to easily manage networking, data centres and infrastructure elements for their business needs and application stack. UNICC offers networking, physical servers, virtual servers, Operating Systems, storage, physical hosting from its data centres or UNICC-brokered arrangements with third party cloud providers.

Cloud Integration Services

UNICC's traditional strengths have been in providing stable private cloud environment for its Client needs, from Enterprise Resources Planning and collaboration platforms to email and Unified Communications, Business Intelligence, web hosting, custom applications and monitoring and reporting.

Recent global innovations have opened the door for public cloud solutions, which are lean and cost-effective, but require advisory services, migration support, and ongoing administrative and cost management services to make these off-the-shelf solutions fit the needs of United Nations organisations, which rely on robust information security and protection of UN information assets in cost-effective and integrated digital business environments.

Client Services

Consulting and Advisory Services

UNICC offers client services from consulting services and IT Advisory Firm Services to application development, project management, training and learning, communications, Robotic Process Automation (RPA) and monitoring.

UNICC Consulting

UNICC provides strategic consulting to CIOs and other executive managers. This includes business model mapping, IT strategy development, project portfolio prioritisation and industry benchmark research and writing. High-level peer review of major projects at key points in a project lifecycle is provided to assess and make appropriate recommendations for the likelihood of successful delivery.

UNICC offers specific subject matter advice across the digital business landscape. From enterprise architecture and risk management to cloud computing, UNICC has a wide range of knowledge in various subjects that can be readily offered according to individual Client needs. UNICC can rapidly assemble the right team of experts and define a proposition tailored to Partner requirements.

ISO (International Standards Organisation) standards represent best practices across a number of different fields. UNICC can assist with certification, providing independent assurance of practice excellence through a knowledgeable and experienced team of Governance, Risk and Compliance (GRC) experts.

IT Advisory Firms

UNICC provides cost-efficient and volume-discounted packages for industry research groups, including Gartner, 451 Research, Cutter Consortium, Forrester, IDC Research, Info-Tech and McLean & Company advisory services. These groups provide excellent research and development as well as industry trend analysis to drive digital business strategic governance and project planning, acting as arbiters between organisations and outside service providers.

Digital Business Communications

UNICC offers digital business communications services, including advisory services, information/content design and delivery, campaign channel management, website content management, crisis communications, social media support, technical writing, editing, translations, event planning, photography and multimedia (video, audio, animations) campaigns, collateral and creative marketing design (templates, documents, posters, presentations, etc.) as well as e-learning and information security awareness support.

UNICC's strong and mature experience within the UN family and the knowledge of its unique context of business activities allows it to offer communications services with professional standards and proactive delivery applied to UN Agency communications context.

Project Management

UNICC's project management services offer Clients an opportunity to tailor or build the required "tools and processes" to align strategic investments with corporate goals, thereby working to yield the highest return, with efficiency and transparency. Based on a proven Project Management Office (PMO) framework, this service leverages the shared expertise of many UN Clients and is adaptable to particular needs. UNICC provides project

management services with direct end-to-end project support from a multi-tiered and multi-locational team that takes full control and responsibility for projects aligned to a Client's governance model.

UNICC services employ best practices and are up-to-date with models and techniques that enable Clients to focus on business competencies and innovation. UNICC aligns to project management standards including PRINCE2, PMBOK and ISO 21500.

Application Development

UNICC's application development services help Clients design, enhance and build mission-critical custom enterprise applications and collaborative solutions, including Intranet, Extranet and corporate website design or revamps, business application development, application integration, data migration, certificate exchange hubs, mobile apps and more.

UNICC's services follow best practices in selecting the fit-for-purpose development process, quality code management, rigorous testing and validation, and other processes and tools for continuous integration and continuous deployment. UNICC's software development framework and techniques follow industry standards and best practices for the Secure Software Development Lifecycle (SSDL).

Learning Services

UNICC helps Clients deliver organisational learning programs, developing training strategies, needs analyses, vendor relationship management, certification programs and training content. UNICC organises workshops for technical, business, and executive staff focused on specialised topics.

UNICC provides learning and training in all areas of best practices and standards, from Microsoft, Cisco, and Oracle technical training to standards-based training in ISO 27001 for information security, ISAE 3402 for audit, ITIL V3 for service management, ISO 20000 for service management system certification and COBIT 5 for IT governance.

Monitoring

IT infrastructure monitoring supports monitoring Clients' end-to-end or component infrastructures by using a common pool of knowledge, resources, tools and systems. The service collects and aggregates near real-time data from a Client's IT infrastructure to generate alerts of unplanned downtime as well as resource saturation.

This service is provided on a 24/7, 365-day basis from a Central Monitoring System and offers support for geographically dispersed locations. It is scalable with quick deployment, customisation and adaptation to Client requirements. Clients can subscribe to a mixture of monitoring levels for a variety of environments from development and testing to production.

Robotic Process Automation (RPA)

Robotic Process Automation is a logical step forward for organisations to increase efficiency in performing rule-based, high volume repeatable business process activities. UNICC's value proposition provides for complete services, from inception to management of 'bots' and all related RPA functions. UNICC co-creates value by offering the 'best-of-breed' and 'absolute fit-for-purpose' RPA solutions across various RPA platforms.

Powered by strategic partnerships with the top three RPA platform vendors (UiPath, Blue Prism and Automation Anywhere) and world-class implementation partners, a robust enablement plan within UNICC delivers the highest quality of RPA work to drive Client Return on Investment.

Common Secure Information Security

Professional Services

UNICC's information security services, as part of a wide range of expanding professional services, cover cyber security oversight and governance as well as operational components.

UNICC is certified with ISO 27001 and offers consulting services to assist other Clients to obtain this key Information Security Management System certification. UNICC is a 2017 and 2020 CSO50 information security award winner.

Common Secure Governance

A proper Information Security Management System (ISMS) framework mitigates the risk of exposure of an organisation to a high risk of negative reputational impact, loss of valuable information, exposure to malicious acts as well as sophisticated and complex cyber-attacks. Institutions without an identified person (or group) responsible for overall information security are susceptible to exposure, attacks, financial damage as well as an unquantifiable loss of information.

Based on its proven record of accomplishment in managing end-to-end Information Security, UNICC offers governance and CISO support services. This is an Information Security Management System service with the goal to protect organisational assets, intellectual property, sensitive data, and reputation. The service leverages the shared expertise umbrella of UN Clients and is adaptable to Client needs.

United Nations
Educational, Scientific and
Cultural Organization

WORLD
METEOROLOGICAL
ORGANIZATION

Common Secure Threat Intelligence Network

This UNICC information security service functions primarily to share timely, relevant and actionable physical and cyber security threat and incident information. This enhances the ability of the United Nations to prepare for, respond to, and mitigate risks associated with these threats.

It offers continuous, reliable and timely information gathering from Agency members, commercial security firms, service providers, federal, state and local government agencies, law enforcement and other trusted resources. It works to build relationships with the cyber community on behalf of the United Nations system and develop a reputation for excellence. Common Secure is positioned to disseminate cyber threat alerts and critical information to organisations across the world.

Common Secure Operations Centre (CSOC)

Many UNICC Clients have implemented cyber security initiatives including Security Information and Event Management (SIEM) systems, endpoint detection and response tools, firewalls, intrusion prevention systems and threat detection and analytics tools.

Many UNICC Clients subscribe to Microsoft and Amazon cloud services, which generate continuous security alerts of various severities. The Common Secure Operations Centre (CSOC) involves a specialised unit that monitors, analyses, and responds to cybersecurity events using a combination of technology processes and solutions.

unrwa
الأونروا

OCHA
United Nations
Office for the Coordination
of Humanitarian Affairs

UNJSPF
United Nations Joint Staff Pension Fund

The CSOC is staffed with skilled cyber security practitioners who have deep knowledge of cyber threats, with matrices and service level agreements that enable Clients to respond to security incidents in a timely manner. CSOC analysts work closely with organisational incident response teams to ensure security issues are addressed quickly upon discovery.

Common Secure Information and Event Management (CSIEM)

Security Information and Event Management (SIEM) solutions and services are typically part of an organisational security operations regime. They provide real-time analysis of security alerts generated by applications and network hardware.

UNICC's Common Secure SIEM services (CSIEM) gather, analyse and present information from network and security devices, including identity and access-management applications, vulnerability management and policy-compliance tools, operating system, database and application logs and external threat data assessment. They provide log auditing, review and incident response. A well-managed CSIEM is a pre-requisite for any successful Security Operations Centre (CSOC).

UNICC provides a managed CSIEM service to help Clients configure business and organisational specific use cases, fine-tuning the CSIEM to reduce false-positives and align systems to organisational security requirements. Clients can benefit from standardised use cases provided by UNICC for other Partners. Additional security services complement the CSIEM service, such as Common Secure Threat Intel Services and Common Secure Security Operations Centre (CSOC).

Phishing Simulation Services

UNICC's phishing simulation services enable Partner Agencies to test effectiveness of their information security awareness programme. UNICC's Information Security Specialists work with Clients to develop content and manage phishing simulation exercises including customising phishing campaigns and platforms to Client requirements, moving from a reactive program to a proactive one.

The service includes design and execution of phishing simulation campaigns, with reports showing results of the campaigns (number of users who have clicked on the links, number of users who have entered credentials, etc.).

Vulnerability Management Services

UNICC's vulnerability management services provide continuous identification and remediation of vulnerabilities and configuration flaws through a combination of processes and technologies that its Information Security specialists can leverage.

These services include host and application vulnerability scans, security configuration checks and Internet footprint monitoring.

Penetration Testing

Penetration testing consists in actively exploiting vulnerabilities in order to prove (or disprove) real-world attack vectors against an organisation's IT assets, data, staff, and/or physical security. It allows to identify weaknesses in information security controls and determine the extent to which adversaries can penetrate into the network or systems being tested. UNICC has partnered with leading cyber security firms to perform third-party penetration tests for those Agencies who are interested.

Incident Response and Forensics

UNICC's Digital Forensics and Incident Response (DFIR) services provide well-defined incident handling procedures for analysing incident-related data and for determining appropriate responses to any organisational security incident. UNICC utilises industry standard best practices to assist its Partner Organizations in the creation of their incident response program, including the establishment of a Computer Security Incident Response (CSIRT) team.

Public Key Infrastructure

A PKI environment provides and manages public and private key encryption and digital signatures to establish a secure network environment for electronic transactions or data transfers and comprises the three main features of authentication, encryption and non-repudiation.

UNICC's PKI services are broadly divided into three categories: internal UN system-wide PKI services for secure communications between Agencies, hosting and managing of organisational PKI infrastructures and publicly-trusted PKI services complemented with a full range of certificate types. UNICC centrally manages an efficient, productive and secure certification environment.

Infrastructure and Network Support

UNICC's infrastructure and network support services span across infrastructure, platform and applications from the delivery of fully managed components to the utilisation and analytics of tools as well as techniques. It includes:

- Two Factor Authentication (2FA)
- Managed firewall infrastructure
- Network intrusion detection and prevention
- Network access control
- Email security services
- Content filtering.

Information Security Awareness

UNICC offers strategic advisory services to help an organisation set up a state-of-the-art, effective information security awareness strategy, an industry-leading cloud-based learning lab and communications support including deliverables with messages, bulletins, posters and portal support.

Organizations will benefit from a security-focused culture, empowering employees to protect assets, prevent downtimes, increase adoption, institute proactive practices, collect risk data, reduce risks and maintain audit compliance.

Electronic Signature

UNICC provides an electronic signature solution with automation technology to confirm the irrefutable validity of every signature in any process workflow, backed up by a comprehensive audit trail. The electronic signature solution, in partnership with DocuSign, offers the following out-of-the-box benefits:

- Increased efficiency with automated signature workflows
- Customised and mobile experiences
- Effortless compliance with industry and global regulations
- Elimination of errors and risk by integrating the solution in systems of record.

SecureAuthN

The Secure AuthN Service provides a connection for enterprise solutions, platforms and applications to authenticate users against their own organizational identity management directory. With minimum modification (the service supports modern authentication protocols), any app can be registered to use the service.

Linking an organization's user directory service (such as Azure AD, on-prem AD or Google Directory) with Secure Authentication is a one-time activity, enforcing all security policies defined by the linked organisation - such as multi-factor authentication (MFA), disabled accounts or password rotation. There is no compromise on app-security, as the application is responsible for user authorisation and controls user rights.

Enterprise Resources Planning (ERP)

Platform Services

UNICC's Oracle and SAP Enterprise Resources Planning managed services provide fully managed solutions for many of the major products from Oracle and SAP.

Oracle and SAP ERP Managed Services

UNICC offers its Clients a variety of ERP platform hosting solutions and support, to give Partner Organizations integrated views of core business processes, often in real-time. Current solutions include:

- Oracle E-Business ERP
- Oracle PeopleSoft ERP
- SAP ERP
- Fusion Middleware Applications/Modules
- Oracle database.

Data and Analytics Services

Software, Infrastructure and Platform Services

UNICC offers Data and Analytics services including consulting, implementation and managed services for decision, analytics and information capabilities, executed on a technology platform that supports and organization's fact-based decision making. UNICC offers years of data and analytics expertise and experience with a proven track record of projects delivered to multiple Agencies.

Consulting and Support

UNICC offers Analytics and Data Management Services including consulting, design, setup, implementation and support services, on diverse technology platforms and organization's fact-based decision-making processes.

Data Analytics - Visualisation

Analytics services consist of technologies, techniques and solutions to transform raw data into meaningful insight for business analysis and strategic decision-making through structured and unstructured data management.

Data visualisation services include enterprise dashboard, reporting, data analysis, data modelling and data discovery. Business Intelligence helps Clients to align decisions against organizational goals with consolidated data visualization.

Advanced Analytics

Advanced analytics is the set of techniques used to discover relationships, recognize complex patterns or predict current trends in Client data. Its objective is to model data from internal and external variables in order to obtain useful business insights.

Advanced Analytics offers diagnostic, predictive and prescriptive analytics, including data lake and data storage, Big Data management and discovery.

Data Management

Data management spans the entire lifecycle of a data assets from original data sources through to final disposition. It involves progress and change throughout data lifetimes for internal and external data streams of an enterprise. Data management platforms and support services, both on-premise and in the cloud, are an all-in-one service including all the necessary hardware, software, hosting and support.

Database Services

Database services, based on the Database Management System (DBMS) from Microsoft, offer advanced features for hosting critical database systems with high performance in a secure environment. UNICC offers fully managed solutions including all the underlying infrastructure.

Enterprise Web Services

Platform Services

UNICC provides a secure, high performance and high available hosting environment for web applications. Clients may select a preferred hosting environment, a preferred web server and more.

Enterprise Web Hosting

UNICC offers Microsoft Windows or Linux servers as hosting environments and several content management system (CMS) solutions, such as Drupal, Liferay, Sitecore and others (Microsoft SharePoint is supported through separate Enterprise SharePoint services).

Features include enterprise search engines, load balancing, clustered database back ends, hardware, software, storage, hosting support as well as backups and restore. UNICC web hosting comprises development, staging, and production environments.

Professionally managed website hosting with UNICC allows organisations to benefit from full technical support. For organisations seeking sensitive data hosting, UNICC will provide the needed data backup and restoration features as well as secure hosting features, both at infrastructure and software levels.

WORLD METEOROLOGICAL ORGANIZATION

Website Traffic Analysis

UNICC offers a high performance website traffic analysis service providing Clients with an analysis of website traffic (e.g. who visited a site, which pages were visited, and how long users stayed on a site). UNICC uses a powerful web analytics software tool to produce website usage statistics in HTML format for viewing with a standard web browser.

The service is available for websites hosted in UNICC such as SharePoint, Drupal, WordPress, Liferay as well as custom websites (Java, Asp.net, PHP, etc.). The results present in both columnar and graphical format, which facilitates interpretation. Yearly, monthly, daily and hourly usage statistics present, along with the ability to display usage by site, URL, referrer, user agent (browser), search string, entry/exit page, username and country. The web analytics tool also provides custom reports for website applications.

UNITED NATIONS UNCTAD

Enterprise SharePoint

Platform Services

UNICC has proven experience in deploying, managing and supporting Enterprise SharePoint servers and services from basic to very complex installations with multiple environments for production, disaster recovery, development and staging. UNICC is a Microsoft Gold Partner with certified teams for Enterprise SharePoint implementation and hosting.

Enterprise SharePoint 2013

Enterprise SharePoint 2013 services are all-in-one services including all necessary hardware, software, hosting and support. Some of the key features offered include:

- Intranet, extranet, enterprise social, collaboration and other websites
- Collaboration, publishing, content, document and records management capabilities
- Business Intelligence and analytics
- Business process management and workflows
- Office Web Apps services.

Enterprise SharePoint Online can be found under Microsoft 365 Management services.

Enterprise SharePoint 2016 and SharePoint 2019 and SharePoint Online

Enterprise SharePoint 2016 and SharePoint 2019 services are fully managed solutions designed to leverage the platform and respond to a wide range of requirements. Accordingly, they offer a variety of subscription plans and options each one with different capabilities.

This service aims at maximising sharing of resources among tenants while maintaining data isolation and application flexibility. In addition, it offers fully dedicated environments tailored to Client requirements and managed based on individual agreements. Key features offered include:

- Intranet, extranet, enterprise social, and websites
- Collaboration and publishing capabilities
- MS Workflow Manager service
- Content, document and records management
- Business Intelligence and analytics
- Business process management and workflows.

Enterprise SharePoint Online can be found under Microsoft 365 Management services.

Computing Services

Infrastructure Services

UNICC offers a wide range of computing services and service packages, including business continuity and disaster recovery (BC/DR) planning, servers and enterprise server support, storage and management, scalable and managed enterprise backup solutions, and data centre and technical equipment room consolidation for Clients.

Business Continuity and Disaster Recovery Planning

Business Continuity (BC) ensures that mission-critical functions continue during and after service disruptions or disasters. Disaster Recovery (DR) involves steps to resume operations, ensuring that a robust and fault-tolerant IT

infrastructure is in place to continue or restart operations after a disruption. This includes restoring business critical data with backups, re-establishing telephony exchanges or network infrastructure to meet business needs. BC/DR planning is a continuous process and uses the continuous improvement approach to increase an organisation's readiness and response to downtimes and disasters.

Servers and Enterprise Server Support

This service includes a wide range of computing service packages. While vServers provide virtual CPU and RAM instances, allowing Clients to commission their own operating systems, enterprise server support services include licensing and Operating Systems support with security, health, hygiene, and monitoring systems. It provides physical server provisioning and hosting services for Clients opting for a bare metal solution hosted in UNICC's Tier-3 data centres. VMware support services offer Clients full management of dedicated VMware environments including setup, configuration and ongoing administration following VMware best practices.

Storage on Demand and Management

These online storage services are based on UNICC's data centre grade technologies in high-end and mid-range arrays over SAN and TCP/IP networks. With multi-vendor setup (HP, DELL, Violin, ORACLE, NetApp, EMC, IBM and HDS), optional combination environments of SSD for high response time, SAS for high performance, and/or NL for high volume are offered to Clients with around-the-clock monitoring and support in UNICC's Tier-3 data centre.

Enterprise Backup

This service offers full and scalable backup, restore and archiving solutions with retention options. With automation and scheduling under highly secure environment, it seamlessly integrates a wide range of operating in VMware infrastructure, with agents for application including Oracle, SAP, SQL Lotus Domino, MS Exchange, and direct block-based backup from any storage solution.

Backup data is secured using at-rest and in-flight encryption. Supporting infrastructure is monitored through UNICC's enterprise monitoring service and data is stored in a highly secure environment. Enterprise backup can be combined with storage on demand for complete end-to-end management.

Data Centre Consolidation

Data centre consolidation services provide a management and support system for Clients data centre/technical equipment rooms that provides on-premises management, consolidation, migration and decommissioning services.

UNICC's value-added expertise in IT infrastructure management also allows UNICC Partners the ability to consolidate its infrastructure before, during, and after cloud migrations. This service features allow Clients to:

- Manage IT infrastructure - on site or remotely
- Support migration to virtual or container technologies
- Help perform hardware refreshes - updating to newer equipment
- Decommission outdated infrastructure
- Relocate equipment to other data centres (such as UNICC's shared service data centres).

Network Services

Infrastructure Services

UNICC provides networking, Internet and connectivity services that leverage well-proven designs, up-to-date technology and best practices. UNICC resources are certified and well versed in many networking and digital business and technology disciplines, from core routing and switching to a full range of applications and services at every network layer.

Network Services

UNICC provides a wide range of network services, including the management, maintenance and monitoring of switching and routing infrastructure, wireless access, web proxy, WAN optimisation, load balancing and application delivery controllers, as well as IP address management to ensure networks are available, secure, nimble and responsive to performance and capacity demands.

Internet and Connectivity Services

UNICC offers a secure, shared Internet Access Service from highly redundant infrastructures complemented with firewalls and caching components.

The DNS hosting and domain registration service is a fully managed 2nd Level DNS system, while FTP Protocol services allow Clients to store/retrieve files in a secure environment. The service is fully managed with 24/7 support, flexible,

secure, highly available and versatile allowing mobility.

Cloud Management and Support

Software, Infrastructure and Platform Services

UNICC is meeting the challenges and drivers for organisations to move to new private, hybrid and public cloud offerings. UNICC offers assessment, migration and implementation as well as fully managed operational support and cost management for a number of cloud solutions, including Microsoft O365, Microsoft Azure, cloud web hosting, AWS Management services, Microsoft Dynamics 365 and ServiceNow services.

Microsoft 365 Management Services

Microsoft 365 Management services help Clients who wish to use the Software as a Service capabilities of Microsoft's public cloud with an emphasis on communications, collaboration, endpoint management, enterprise mobility and identity management.

This service includes full lifecycle support from inception to production, with one-time and recurring activities designed to fit specific Client sizes and needs. From on-boarding to full administration of tenants including support of individual Office 365 services and applications, the service is scaled to provide powerful and controlled cloud productivity support to organisations of all sizes, helping them control cloud operations, costs and free up valued resources.

Microsoft Azure Management Services

Microsoft Azure management services provide value added options for Clients who seek to host their applications, platforms and infrastructure in the Microsoft Azure cloud. The service spectrum varies from Clients building and operating services in Azure to UNICC building, deploying and operating these services on their behalf.

UNICC provides architecture, business analysis and application development services in conjunction with Microsoft Azure management services, to build turnkey solutions for its Clients. The overall services is structured with three pillars: cost management, cloud administration and cloud deployment.

Microsoft Azure management services include a full lifecycle support from inception to production, with one-time and recurring activities as well as cost management.

Microsoft Dynamics 365

UNICC's Microsoft Dynamics 365 services help Clients transform their processes across domains. They help organisations in every step of their digital transformation journey for business processes, including licensing needs, Dynamics 365 configuration, custom development, integration, training and support. This facilitates resilient, secure, automatable, repeatable and predictable processes. UNICC can analyse, install, configure, customise and integrate Dynamics 365 for the entire Client organisation.

For non-profit organisations, UNICC has been part of the Microsoft Insiders Program for the Non-profit Accelerator, which brings non-profits the tools for donor management and fundraising, program management, volunteer management and compliance with International Aid Transparency Initiative (IATI) standards for transparency.

AWS Management Services

AWS management services provide value-added options for Clients who seek to host their applications, platforms and infrastructure in the Amazon Web Services cloud. The service spectrum varies from the Clients building and operating services in AWS (leveraging UNICC's AWS Enterprise Agreement) to UNICC building, deploying and operating these services on behalf of Clients.

UNICC provides architecture, business analysis and application development services in conjunction with AWS Management services, to build turnkey solutions for its Clients. The overall service is structured with three pillars: cost management, cloud administration and cloud deployment. AWS management services include a full lifecycle support from inception to production, with one-time and recurring activities as well as cost management.

AWS services now include Enterprise Support services for affiliates, who are able to leverage enterprise support services from UNICC or Client licensing models.

Cloud Web Hosting

Cloud web hosting services aim to be the go-to cloud web hosting solution when control, security and performance are of utmost importance. UNICC provides the required automation, scalability and reliability so that clients are able to focus on development. This service is built to provide flexible cloud web hosting solutions for distinct platform and deployment control needs to Clients who seek to host or extend their web applications into the public, UNICC-managed cloud by the use of latest platform technologies, coupled with controlled deployments. All major Content Management Systems (CMS) solutions and programming languages are supported.

ServiceNow

ServiceNow is an integral service that will help organizations adopt a single cloud platform across the IT value chain. Organizations are in the midst of digital transformation across all aspects of their businesses, but they are often hindered by a complex web of legacy processes and systems. UNICC, through ServiceNow services, provide partners an opportunity to quickly transform the employee experience and optimise corporate services so they can focus on business innovation. Built to manage everything as a service, ServiceNow services helps the modern enterprise operate faster and be more scalable than ever before. It does this by placing a service-oriented lens on the activities, tasks and processes that make up the day-to-day work life.

Enterprise Voice

Enterprise Voice services provide unified communications, connecting co-workers, partners, vendors and Clients in the field to better facilitate interactions across a spectrum of devices. Designed and implemented with the infrastructure of IP telephony with phone equipment and configuration of a widely accessible enterprise voice system, this service is available with multiple vendors (Cisco, Microsoft, etc.) and diverse configurations for customised enterprise telephony.

About UNICC - The United Nations International Computing Centre is the leading provider of digital business services within the United Nations system. Over the last four decades, UNICC has been continually expanding the services it is providing to its Partners in various parts of the world, and in various areas of digital business.
